**Przeliczniki / Converters:**

1 metr sześcienny / cubic meter = 330 kg

1 metr ładunkowy / load meter = 1500 kg

Transport wyceniany jest na podstawie wyższego z dwóch podanych niżej parametrów / Transportation is priced based on the higher of the following two parameters:

a) wagi rzeczywistej lub / the actual weight or

b) wagi przeliczeniowej - to najwyższa waga wynikająca z użycia jednego z dwóch parametrów / conversion weight - this is the highest weight resulting from the use of one of the two parameters

**Przeliczniki / Converters:**

1 metr sześcienny / cubic meter = 330 kg

1 metr ładunkowy / load meter = 1500 kg

Transport wyceniany jest na podstawie wyższego z dwóch podanych niżej parametrów / Transportation is priced based on the higher of the following two parameters:

a) wagi rzeczywistej lub / the actual weight or

b) wagi przeliczeniowej - to najwyższa waga wynikająca z użycia jednego z dwóch parametrów / conversion weight - this is the highest weight resulting from the use of one of the two parameters
